

A close-up, profile view of a white, humanoid robot head with green eyes and green mechanical components visible at the base of the neck. The robot is looking towards the right.

DISCOVER A WORLD OF INNOVATIONS

The complete product range of SafanDarley

The E-volution in sheet metal working

Discover the complete product range of SafanDarley

E-Brake
35 T - 40T Premium
Ergonomic

E-Brake
35T - 130T Premium

E-Brake
50T - 130T Ultra

E-Brake
160T - 300T Ultra

As the inventor of the electronic press brake, SafanDarley set in motion a world wide Evolution in sheet metal working. Even now, SafanDarley continues to work on innovative ways to raise your efficiency levels.

With SafanDarley, you will be able to operate at the highest possible level from the get-go and benefit from unique innovations and developments, guided by the people who set the standard: the highest possible standard for integrated sheet metal working.

The best way to predict the future of bending

is to invent it

SafanDarley offers innovative solutions for all sheet metal processing, with groundbreaking electronic, hybrid and hydraulic techniques. Thus, we are unfolding a challenging future in which you can manufacture more Efficiently, Economically, Ergonomically and Ecologically. Complex products, large and small series: process optimisation is a fact, lean manufacturing with zero defects is a given and just-in-time production is guaranteed.

The future unfolded

Electronic & Ergonomic

E-Brake 35T-40T Premium Ergonomic

Ergonomic model with individually adjustable seated working comfort.

Electronic press brakes

E-Brake 160T-200T & 300T Ultra Dual Drive

The Original E-Brake from the inventor, the most extensive programme of electronic press brakes in the world.

Electronic press brake Ultra

E-Brake 50T-130T Ultra

The high-end modularly constructed range of E-Brakes from 50T - 130T.

Electronic press brake Premium

E-Brake 35T-130T Premium

The fourth generation E-Brake adds important new features to the existing E-Brake. Including a new design with advanced ergonomics and a split screen control as standard.

Automatic flexible bending cell

E-Brake Mini Cell

Compact automatic flexible bending cell, equipped with the latest type of Fanuc Robot. Ideal for fully automatic production of small complex products.

Intelligent tool changer

E-Brake 160T-200T iTC

The E-Brake iTC is the continuation of the successful Electric servo E-Brake 160T 3100 and 200T 4100. What makes this intelligent innovation so unique is the fact the machine has been expanded with an automatic tool changer.

Hydraulic press brakes

H-Brake 175T-1250T Ultra

Tried and tested hydraulics and an innovative construction with independent measuring device and large daylight opening. Also employable as tandem.

Compact hybrid press brake

H-Brake Hybrid 110T-1600 Premium

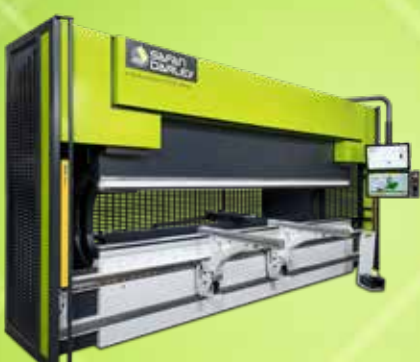

High pressing force over a short bending length. Ideal for bending small, complex parts in thicker material. A perfect solution where space is limited.

Hybrid press brakes

H-Brake Hybrid 110T-170T Premium

The H-Brake Hybrid 110-170T Premium is Characterised as the basic Hybrid version. The machine is equipped with an innovative hybrid drive, a combination of hydraulics and electronics.

Hybrid press brakes

H-Brake Hybrid 110T-170T Ultra

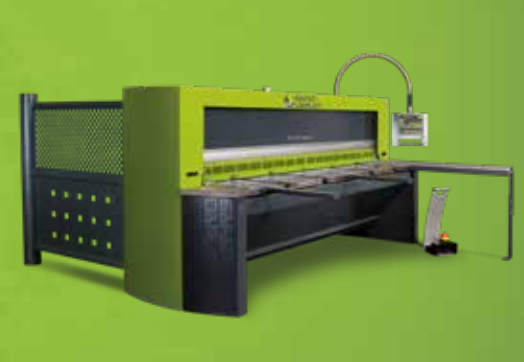

The H-Brake Hybrid 110-170T Ultra is an exemplary model of sustainable thinking in a Smart Industry. The machine can optionally be equipped with a 3D backgauge and E-Bend L Blue system.

Integrated systems

R-Brake 130T

Unique combination of electronic press brake 130T-3100 with integrated robot on a 6 metre long gantry at the top.

Hybrid and hydraulic shears

M-Shear and B-Shear

Superior shearing technique, hybrid drive or hydraulic drive, up to 6 metres in shearing length and 16 mm of sheet thickness.

Connected with the smartest solutions in sheet metal working
